RE: Proposed North Airfield Expansion at Hanscom Airport

Dear Governor Healey,

We, the undersigned Newton City Councilors, extend our appreciation that you have made reducing the harm of the climate crisis one of your priorities.

Newton is one of the leading communities with an ambitious climate action plan and one of the municipalities allowed to require electrification on all new and major renovations. We have installed over 16K solar panels on public buildings and parking lots and 22 EV chargers throughout the city and have taken other measures to reduce greenhouse gas emissions. We are currently studying other areas that will further reduce our greenhouse gas emissions. We do not want to see these efforts negated due to increased private jet travel.

Therefore, as Newton City Councilors, we oppose the expansion of private jet facilities at Hanscom Field, or elsewhere, for private luxury travel because such an expansion is contrary to the urgent need to reduce the Commonwealth's greenhouse gas emissions and environmental justice goals. It is neither appropriate nor equitable to enable the ultra-wealthy to exacerbate the loss and damage caused by the climate crisis.

We urge the governor to take all possible actions to prevent the private jet hangar expansion from proceeding at Hanscom Field.

Sincerely yours,

.....
